

ComposePro

Real-time, visual 'expert girlfriend' coach in your camera view

- Shows exactly where to place subject, align horizon, angle to light
- Simple on-screen guides (dots, lines, highlights), not long text
- Built for smartphone-first users who want better photos now

The Problem

Beginners know what looks good but can't set it up in the moment

- Most common mistakes: centered subjects, tilted horizons, messy backgrounds, no look room
- Composition is observational—harder to learn than camera settings
- Passive learning (articles/videos) doesn't help while framing

Market Context & Timing

Smartphone photography dominates; users expect smart assistance

- ~1,440 photos/year per user; 75% from smartphones; 68% shared within 24h
- 52% edit almost every photo; 30% use AI-powered tools
- Live coaching apps already ship (FrameUp, GudoCam, Klick)—proving demand

Target Users (Personas)

Four primary segments with distinct needs

- Social Sharer (18–34): better everyday photos with minimal effort
- Travel & Food Creator (22–40): consistent aesthetics, faster workflow
- Enthusiast Upgrader (25–50): deliberate practice, measurable improvement
- Local Pro (28–55): faster setup, fewer reshoots, consistent results

Needs & Pain Points

Functional, emotional, and social needs

- Functional: show me where to place subject/horizon; angle to light; keep it visual
- Emotional: confidence, control, progress
- Pains: observational gap, repeated errors, passive learning, app distrust, battery fears

Solution (MVP)

Live overlays + light/angle prompts + progress tracking

- Rule-of-thirds grid, horizon level, subject placement dot/box
- Light-direction prompts, angle/height nudges, distraction highlights
- Genre presets (Portrait/Landscape/Street/Food/Product)
- Progress: streaks, before/after, simple analytics

Differentiation

Own the 'in-the-moment' niche with trust-first design

- Deterministic overlays + horizon level first, then AI coaching
- Light-direction + angle/height nudges—beyond just grids
- Free core overlays, no watermark, transparent pricing

User Journeys (Highlights)

From first win to paid conversion

- Social Sharer: first win <60s; 3-min challenges; Pro at \$6.99/mo
- Travel & Food Creator: genre presets; consistency score; annual plan
- Enthusiast: deliberate-practice loops; analytics; community critique
- Local Pro: reshoot-rate reduction; session time saved; annual/lifetime

Business Model & Benchmarks

Pricing tests aligned with category medians

- Tests: \$6.99 vs \$9.99/month; \$39.99–\$49.99/year; lifetime for pros
- Benchmarks: Photo & Video ~\$12.99/mo, ~\$38.42/yr; Education ~\$8.38/mo, ~\$44.99/yr
- Annual renewal medians: 23–40%

Go-to-Market

ASO + short-form content + community challenges

- Keywords: 'composition coach,' 'rule of thirds camera,' 'live photography tips'
- 30–60s reels showing before/after with live overlays
- 7-day 'One Rule Per Day' challenge with shareable carousels
- Partnerships: micro-influencers (phone photography, travel)

Feasibility & Plan

MVP in 4–6 weeks on iOS/Android

- iOS: AVCapture + Vision (horizon, contours) + Core ML
- Android: CameraX + ML Kit/TFLite (object detection)
- Risks: AI reliability, battery/latency, billing trust
- Mitigations: lite mode, throttled AI, transparent pricing

Ask & Next Steps

Validate → Build → Launch

- Validate: 2-week concierge MVP (30 users, 7-day challenge)
- Build: MVP in 4–6 weeks; beta test with 100 users
- Launch: ASO + short-form + challenges; measure D1/D7/D30, conversion
