

ComposePro — 12-Slide Research & Pitch Outline

Slide 1 — Title & One-Liner

- ComposePro: A real-time, visual "expert girlfriend" coach in your camera view.
- Shows exactly where to place subject, how to align horizon, and how to angle to light—using simple on-screen guides (dots, lines, highlights), not long text. [45][47][50][55]

Slide 2 — The Problem (Evidence)

- Beginners know what looks good but can't reliably set up composition in the moment. [5][33][65][75]
- Most common, fixable mistakes: centered subjects, tilted horizons, messy backgrounds, no look room, eye-level-only shots. [5][33][38][43][65][67][75][79]
- Passive learning (articles/videos) doesn't help while framing; users want live cues before capture. [22][41][55][59]

Slide 3 — Market Context & Timing

- Smartphone users take ~1,440 photos/year; 75% of all photos from smartphones; 68% shared on social within 24h. [134]
- 52% edit almost every photo before sharing; 30% use AI-powered tools. [133]
- Live coaching apps already ship (FrameUp, GudoCam, Klick), proving feasibility and demand. [45][47][50][53][83][89][90][92]

Slide 4 — Target Users (Personas)

- Social Sharer (18–34): wants consistently better everyday photos with minimal effort. [7][8][75][132][134]
- Travel & Food Creator (22–40): needs consistent aesthetics and faster workflow on the go. [134]
- Enthusiast Upgrader (25–50): seeks deliberate practice, measurable improvement, genre mastery. [110][112][114][137]
- Local Pro (28–55): wants faster setup, fewer reshoots, consistent client results. [137][139]

Slide 5 — Needs & Pain Points

- Functional: show me exactly where to place subject/horizon; tell me how to angle to light; keep it visual and fast; offer genre presets. [45][46][50][56][65][67][75]
- Emotional: confidence, control, progress. [32][40][75][113][135]

- Pains: observational skill gap; repeated framing errors; passive learning; app distrust (upsells/watermarks); battery/latency fears. [16][22][23][27][30][32][41][43][55][59][60][62][66][78][86][93]

Slide 6 — Solution (MVP)

- Live overlays: rule-of-thirds grid, horizon level, subject placement dot/box. [45][46][50][56][79]
- Light-direction prompts: simple arrows/text ("Shift so light hits from side"; "Reduce backlight"). [65][67]
- Angle/height nudges: "Try lower angle"; "Tilt slightly down to clean background." [5][33][43][45]
- Distraction highlights: mark clutter/photobombs/overexposed sky and suggest reframe. [45][65][67]
- Genre presets: Portrait / Landscape / Street / Food / Product. [5][33][43][67]
- Progress: streaks, before/after, simple analytics (horizon aligned %, subject on-third %). [1][41]

Slide 7 — Differentiation

- Own the "in-the-moment" niche: deterministic overlays + horizon level first, then layer AI coaching with confidence indicators. [45][47][60][62]
- Light-direction coaching + angle/height nudges—beyond just grids. [65][67][75]
- Trust-first monetization: free core overlays, no watermark, transparent trials, easy cancellation. [60][62][66][71][74]

Slide 8 — User Journeys (Highlights)

- Social Sharer: first win in <60s; 3-minute challenges; before/after share; Pro at \$6.99/month. [36][71][74][117][119]
- Travel & Food Creator: genre presets; consistency score; annual plan \$39.99–\$49.99. [71][74][134]
- Enthusiast Upgrader: deliberate-practice loops; analytics; community critique; Pro conversion. [39][71][74][135]
- Local Pro: reshoot-rate reduction; session time saved; annual/lifetime plan. [71][74][137]

Slide 9 — Business Model & Benchmarks

- Pricing tests: \$6.99 vs \$9.99/month; \$39.99–\$49.99/year; lifetime for pros. [71][73][74][76][81]
- Benchmarks: Photo & Video median ~\$12.99/month, ~\$38.42/year; Education median ~\$8.38/month, ~\$44.99/year. [71][73][74]
- Annual renewal medians: 23–40% across top categories. [72]

Slide 10 — Go-to-Market

- ASO: keywords "composition coach," "rule of thirds camera," "live photography tips." [1][2][52]
- Short-form content: 30–60s reels showing before/after with live overlays. [4][13][34][56]
- Community challenges: 7-day "One Rule Per Day" with shareable before/after carousels. [17][18][19][20][55]
- Partnerships: micro-influencers (phone photography, travel creators). [23][78]

Slide 11 — Feasibility & Plan

- iOS: AVCapture + Vision (horizon, contours) + Core ML; Android: CameraX + ML Kit/TFLite (object detection). [45][47][83][96][97][100][105]
- MVP in 4–6 weeks: overlays + horizon + subject dot + light/angle prompts + genre presets + progress. [45][46][50][56][79]
- Risks: AI reliability, battery/latency, billing trust; mitigations: lite mode, throttled AI, transparent pricing. [60][62][66][78][86][93]

Slide 12 — Ask & Next Steps

- Validate: 2-week concierge MVP (30 users, 7-day challenge) to confirm in-the-moment value and pricing. [36][71][74]
- Build: MVP in 4–6 weeks; beta test with 100 users; iterate on light/angle prompts and genre presets. [45][47][50][56]
- Launch: ASO + short-form content + community challenges; measure D1/D7/D30 retention and free→paid conversion. [36][39][71][74][117][119]
